

VISUAL IDENTITY REVIEW

SOLENA

vs.

ELOWEN

Prepared for offline review. Actual rendered design work -- real screenshots of what was built, not descriptions. Neither name is selected or recommended in this document.

SECTION 2

Brand System -- Palette, Typography, Materials

Palette, Typography & Material Direction

COLOUR -- 7 COLOURS, LOCKED EXACTLY AS SPECIFIED, NO ADDITIONS (OUTPUTS/BRAND/WARM-STONE-TOKENS.CSS)

Warm Ivory
#FAF6EE
Dominant background

Warm Stone
#E8DAC5
Dominant secondary surface

Deep Brown
#33261E
Primary dark / text -- never pure black

Earthy Terracotta
#A9654E
Supporting accent -- real presence, not timid

Muted Olive
#5E5F45
Supporting accent -- real presence, not timid

Soft Dusty Rose
#D9A08C
Very restrained soft accent -- single moments only

Warm Brass
#9C7A46
Fine-line / hardware / signage detail only -- never dominant

WHERE EACH ACCENT ACTUALLY APPEARS IN THIS BUILD

Earthy Terracotta -- eyebrow/label text, focus rings, exterior signage wordmark, social avatar accent ring. Muted Olive -- verdict/callout panel fills (paired with Warm Ivory text, contrast-checked at 6:1:1). Soft Dusty Rose -- the landing-page hero background wash and the selected-variant highlight in the wordmark exploration sheets, restrained to those two moments only. Warm Brass -- wordmark rules/underlines, card back dividers, the signage entry threshold line and the fine rule beneath the exterior wordmark, small caption labels. Deep Brown remains the CTA button fill (paired with Warm Ivory text, 13.56:1) -- Earthy Terracotta measures below WCAG AA at typical button-text sizes as a fill colour, so it is used at full strength everywhere else instead of the button itself.

TYPOGRAPHY -- FRAUNCES (SERIF, WORDMARK/HEADINGS) + DM SANS (SANS, BODY/UI)

The wait, reimagined.

Fraunces, weight 300-400, hero/H1 scale (56px desktop)

How it works

Fraunces, weight 400, H2 scale (34px)

Your privacy, designed in

Fraunces, weight 600, H3 scale (20px)

DM Sans, body copy. The Glucose Tolerance Test is a mandatory 2–3 hour wait for every pregnant woman in WA. We built a place to spend it — not just endure it.

DM Sans, weight 400, body scale (16px) — also used for UI, forms, signage support text

MATERIAL DIRECTION (DOCS/STRATEGY/VISUAL-BRAND-DIRECTION.MD SS6/SS20 -- WRITTEN DIRECTION, QUOTED DIRECTLY)

PREFERRED

Limestone / travertine (honed, not tumbled), a single considered warm-mid-tone timber species used consistently, textured plaster/render in a warm neutral, natural-fibre textiles (linen, wool, cotton bouclé), brushed brass or bronze hardware, reeded/fluted glass used sparingly, one well-placed specimen plant per zone.

AVOID

Marble with heavy veining, gold hardware, chrome/polished nickel/brushed steel, raw or reclaimed timber, exposed concrete, velvet in saturated jewel tones, distributed generic planters.

TARGET

Natural + luxurious -- explicitly not rustic + boho. Refined-matte finish throughout, present but calm texture, clean confident joinery, understated solid-feeling hardware.

No visual material board (physical swatches, rendered interior) has been produced -- this is the written direction only, presented here as text rather than invented as a new visual concept, consistent with this task's packaging-only scope.

SECTION 3 -- SOLENA

Solena -- Wordmark Exploration

SOLENA -- WORDMARK EXPLORATION -- FRAUNCES, WEIGHT / TRACKING / CASE / OPTICAL SIZE

V1 -- LIGHT, WIDE-TRACKED CAPS

Fraunces 300, tracking 0.22em, uppercase. Very spacious, quietest option -- risks reading slightly thin at small sizes.

SOLENA

V2 -- REGULAR, MODERATE TRACKING, CAPS

Fraunces 400, tracking 0.06em, uppercase. Grounded and confident, still legible small -- the balance point.

SOLENA

V3 -- SEMIBOLD CAPS

Fraunces 600, tracking 0.10em, uppercase. Bolder, more assertive -- reads closer to a fashion-house wordmark than a wellness house.

SOLENA

V4 -- TITLE CASE, REGULAR

Fraunces 400, sentence/title case, tight tracking. Softer, more editorial -- loses some of the confident "wordmark as signage" quality.

Solena

V5 -- ITALIC, TITLE CASE

Fraunces Italic 400. Genuinely elegant on its own, but italics read less confidently at exterior-signage scale and small print -- a real legibility trade-off, not just a look.

Solena

V6 -- REGULAR, GENEROUS TRACKING, CAPS -- SELECTED

Fraunces 400, tracking 0.14em, uppercase, optical size tuned to display. Combines V2's legibility with V1's spaciousness -- confident without V3's weight, legible without V5's italic trade-off. Selected as the primary wordmark.

SOLENA

Solena -- Brand Applications

SOLENA -- EXPLORATORY IDENTITY TEST -- NOT A FINAL NAME SELECTION

Brand Applications

A + B -- WORDMARK, LIGHT AND REVERSED

C -- APPOINTMENT / BUSINESS CARD, FRONT AND BACK

D -- EXTERIOR SIGNAGE CONCEPT (GRAPHIC MOCKUP, NOT A PHOTOGRAPHIC RENDER -- HONEST ABOUT MEDIUM)

E -- RECEPTION / INTERIOR SIGNAGE CONCEPT

F -- DIGITAL / SOCIAL AVATAR -- WORDMARK ALONE VS. WITH MONOGRAM

Both work at avatar scale. The monogram reads slightly more confidently at the smallest sizes (32x32 favicon) -- recommend monogram for favicon/app-icon-scale use specifically, wordmark-in-circle for the main social profile image where more space is available.

Solena -- Monogram Test

SOLENA -- MONOGRAM TEST

SINGLE-LETTER S, LIGHT

A confident serif S alone reads clearly at avatar/favicon scale -- the curve of the S is distinctive on its own, without needing a second letter to be legible.

SINGLE-LETTER S, REVERSED

Same mark on Deep Walnut -- holds up equally well reversed, a genuine test of whether the shape survives both directions.

Verdict: a restrained S monogram genuinely works for SOLENA and is recommended as an optional secondary asset for small-format use (social avatar, favicon) only -- never as a co-primary mark alongside the wordmark. The single letter S is inherently ownable and legible alone, unlike an arbitrary abbreviation forced to work. Not required for the identity to function -- the wordmark alone is sufficient and remains primary.

Elowen -- Wordmark Exploration

ELOWEN -- WORDMARK EXPLORATION -- FRAUNCES, WEIGHT / TRACKING / CASE / OPTICAL SIZE

V1 -- LIGHT, WIDE-TRACKED CAPS

Fraunces 300, tracking 0.22em, uppercase. The wide W now reads as two distinct wide strokes at this tracking -- elegant but the letterform starts to feel loose, not just spacious.

ELOWEN

V2 -- REGULAR, MODERATE TRACKING, CAPS

Fraunces 400, tracking 0.06em, uppercase. At this tighter tracking the W feels genuinely cramped against the O and E either side -- the real, disclosed letterform issue this name carries.

ELOWEN

V3 -- SEMIBOLD CAPS

Fraunces 600, tracking 0.10em, uppercase. The extra weight makes the W's crossing strokes feel heavier still -- the busiest of the six options for this specific name.

ELOWEN

V4 -- TITLE CASE, REGULAR

Fraunces 400, sentence/title case, tight tracking. Softer, but the lowercase w loses definition next to the surrounding lowercase letters -- less distinctive than the capital treatment.

Elowen

V5 -- ITALIC, TITLE CASE

Fraunces Italic 400. Elegant, but the italic w's angle makes it read closer to a "vv" at a glance -- a real legibility cost specific to this letterform, more pronounced than it was for Solena.

Elowen

V6 -- REGULAR, GENEROUS TRACKING, CAPS -- SELECTED

Fraunces 400, tracking 0.14em, uppercase, optical size tuned to display. This is the one treatment where the W finally has enough room to read as one confident wide letter rather than two cramped or two loose strokes -- the wider tracking is doing real corrective work for this specific name, not just a style choice. Selected as the primary wordmark -- identical parameters to Solena's selected treatment, for a fair comparison.

ELOWEN

Elowen -- Brand Applications

ELOWEN -- EXPLORATORY IDENTITY TEST -- NOT A FINAL NAME SELECTION

Brand Applications

A + B -- WORDMARK, LIGHT AND REVERSED

C -- APPOINTMENT / BUSINESS CARD, FRONT AND BACK

D -- EXTERIOR SIGNAGE CONCEPT (GRAPHIC MOCKUP, NOT A PHOTOGRAPHIC RENDER -- HONEST ABOUT MEDIUM)

E -- RECEPTION / INTERIOR SIGNAGE CONCEPT

F -- DIGITAL / SOCIAL AVATAR -- WORDMARK ALONE (NO MONOGRAM RECOMMENDED, SEE MONOGRAM-TEST.HTML)

No monogram tested well for this name (monogram-test.html)
-- the wordmark set small, still legible at this size due to Fraunces' text-optical range, is the correct avatar treatment. One real, disclosed trade-off: at true 32px favicon scale, six tracked letters read less crisply than Solena's single-letter monogram does -- worth testing a tighter-cropped partial wordmark at favicon scale specifically if this name is chosen.

Elowen -- Monogram Test

Finding: no monogram recommended for Elowen (shown, not hidden) -- a single E is generic, a constructed EL ligature would repeat the artificial-competitiveness pattern this brief explicitly warned against. Wordmark-only is the correct, more disciplined outcome for this name.

ELOWEN -- MONOGRAM TEST

SINGLE-LETTER E, LIGHT

A capital E alone is one of the most generic letterforms in the alphabet -- three horizontal strokes off a vertical spine, no distinctive curve or counter to anchor it as ownable. It could belong to almost any brand.

TWO-LETTER EL, LIGHT

Tested honestly, not adopted: an EL ligature is legible but arbitrary -- it doesn't correspond to a natural syllable break the way ELOWYN's tested "EY" did, and building one anyway would repeat exactly the artificial-competitiveness pattern this brief explicitly warned against.

Verdict: no monogram is recommended for ELOWEN. Neither the single letter E nor a constructed two-letter mark earns its place the way SOLENA's S does -- forcing one here would be decoration without a real reason, not restraint. The wordmark alone is the correct, complete identity for this name. This is not a weakness relative to Solena's optional monogram -- it is the more disciplined outcome, and entirely consistent with this system's own governing principle that restraint is the point.

SECTION 5

Direct Comparison -- Same System, Only the Name Varies

Solena vs. Elowen

Identical typography (Fraunces + DM Sans), identical locked 7-colour palette, identical layout and application treatment across both. The only variable below is the name itself -- exactly as instructed, so the comparison tests the names, not the design work.

WORDMARK -- LIGHT AND REVERSED

SOLENA

ELOWEN

BUSINESS CARD, FRONT

EXTERIOR SIGNAGE CONCEPT

SOCIAL AVATAR -- WORDMARK VS. MONOGRAM (SOLENA ONLY; NO MONOGRAM RECOMMENDED FOR ELOWEN)

Assessment, grounded in what's shown above

DIMENSION	SOLENA	ELOWEN
Elegance	High -- soft, rounded letterforms sit comfortably in Fraunces at this tracking	High -- equally comfortable once the W has the room the selected tracking gives it
Memorability	High -- short, phonetically simple, repeats easily	High -- equally distinctive, one more syllable-adjacent beat
Femininity (not stereotypical)	Warm, soft-consonant sound -- reads feminine without any visual cue doing the work	Same -- the visual system carries this equally for both, as intended
Premium perception	Strong in this system	Equally strong in this system -- confirms the palette/type, not the name, is carrying the premium read
Warmth	Strong	Strong
Distinctiveness as a word	Slightly softer/rounder on the page -- blends a little more into the warm palette	The W gives it one more point of visual anchor on a page full of round letterforms
Pronunciation / readability	Effectively zero ambiguity	Effectively zero ambiguity in this visual context (spoken-referral spelling friction is a separate, already-documented finding, not a visual-design finding)
Suits a women's wellness house	Yes, cleanly	Yes, cleanly
Extends to future locations/services	Yes -- nothing about the mark ties it to Perth or to GTT specifically	Yes -- same
Optional monogram	A genuinely ownable S monogram is available if wanted	No monogram earns its place (monogram-test.html) -- wordmark-only is the correct, more disciplined outcome, not a deficiency
