Projected Profit and Loss Statement

Business	GTT Center Perth
Document	Projected Profit and Loss, Year 1 and steady state
Prepared by	Theodore (CFO) for Anthony Zed. Updated 2026-10-16 (Grace, to Anthony's instructions of 2026-10-16)
Date	2026-10-16
Status	DRAFT for review
Legal entity	to be confirmed
Currency	Australian dollars (A$). All figures GST-inclusive unless stated
Basis	3-Way Financial Model v0.5 (2026-10-16): 25-minute pair cadence only, adaptive rostering, full capacity (18 clients a morning) from Month 1, headline rent A$8,000 per month

All figures are planning estimates. The venue is not yet open and no trading data exists.

1. Twelve-month projected P&L (Months 1 to 12)

There is no ramp-up. The plan opens at the full 18 clients a morning, filled through marketing and a pre-launch waitlist, so every month is a full-capacity month. The A$600 to A$1,200 marketing ramp of the earlier model is replaced by the steady A$1,500 a month from Month 1.

Year 1 summary: revenue A$1,716,844.44, total costs A$1,294,607.64, net operating profit A$422,236.80. This is exactly 12 times the steady-state month.

Line definitions and sources

Line	How it is built	Source
AM GTT packages	18 AM clients per day x A$250 x 26.33 trading days	Financial model
PM services	10 sessions per day, about 210 transactions per month at A$117 average	Financial model; PM capacity model
Ancillary	A$0. Excluded from the baseline by founder decision (2026-07-30)	the financial model
Lab fee	A$0. The model assumes the pathology lab bulk-bills Medicare. Tender fees are not yet confirmed	Financial model
GTT supplies / consumables	A$400 + A$800 per month, flat	Financial model
Variable labour	AM phlebotomists and therapists rostered to the confirmed bookings (at 18 clients: 2 phlebotomists and 8 therapists), plus super 12% and workers compensation 1.7%	Financial model
Fixed labour	PM wages A$12,704.74 + Venue Manager A$7,040.00 = A$19,744.74, plus on-costs = A$22,449.77	Financial model
Rent	A$8,000 per month (headline, per Anthony's instruction)	Financial model
Other fixed overhead	Utilities, insurance, laundry, marketing (A$1,500), software, cleaning, accounting, miscellaneous	Financial model

Not in the model: income tax (entity undecided), depreciation, interest (no debt assumed).

How Year 1 relates to the earlier figures. The earlier Year 1 net of A$322,014.93 (and A$196,608.65 after GST) assumed the first four months ran at 43%, 64%, 79% and 93% of capacity. That ramp-up has been removed by decision. Year 1 is now A$422,236.80 (and A$281,310.96 in the GST-stress case), which is 12 times the steady-state month. The difference (A$100,221.87) is the

profit the old ramp-up assumption was giving away in Months 1 to 4. It depends entirely on the waitlist delivering a full morning from the first day (see Notes 2).

2. Steady-state monthly P&L (Month 5 onward is now Month 1 onward)

Anthony's brief asked for both "fixed overhead (rent ceiling A$10.5k)" and the "+A$35,186 baseline". **These do not go together: the +A$35,186.40 baseline uses A$8,000 rent, so both are shown below.**

A$ per month			
AM GTT packages	118,485.00	118,485.00	118,485.00
PM services	24,585.37	24,585.37	24,585.37
Ancillary	0.00	0.00	0.00
Total revenue	**143,070.37**	**143,070.37**	**143,070.37**
Lab fee	0.00	0.00	0.00
GTT supplies and consumables	1,200.00	1,200.00	1,200.00
Variable labour (rostered AM)	71,145.86	71,145.86	71,145.86
Fixed labour (PM + Venue Manager)	22,449.77	22,449.77	22,449.77
Rent	8,000.00	10,500.00	8,000.00
Other fixed overhead	5,088.34	3,838.34	5,088.34
Total costs	**107,883.97**	**109,133.97**	**107,883.97**
Net operating profit (before GST timing)	**35,186.40**	**33,936.40**	35,186.40
Less: GST on sales (revenue ÷ 11)	not applied	not applied	-13,006.40
Add: GST credits on costs	not applied	not applied	1,262.58
Net after GST			**23,442.58**
Reported figure	**+A$35,186.40**	**+A$33,936.40**	**+A$23,442.58**

Annual and margin. +A$35,186.40 x 12 = **A$422,236.80** a year. Net margin = 35,186.40 ÷ 143,070.37 = **24.6%**. The GST-stress case gives +A$23,442.58 x 12 = A$281,310.96 a year.

Column notes: - **Headline:** the committed model at 18 AM clients per day. - **Gross ceiling:** A$10,500 all-in per the commercial site brief. The model assumes utilities (A$650) and cleaning (A$600) sit inside the ceiling, so other overhead falls by A$1,250. If they do not, the separate "rent-adjusted A$10,500" case gives +A$32,686.40. - **GST-stress:** assumes all sales are taxable at 10% and the A$250 package price includes GST. At the gross ceiling the GST-stress figure is +A$22,306.21.

3. Break-even working

Adaptive rostering on the 25-minute pair cadence (first booking 07:00, last first draw 10:20)

Step	Working	Result
1. Fixed costs per month	Rent, other overhead, cost of goods, PM labour and Venue Manager with on-costs	A$36,738.11
2. Add the AM roster for a morning of up to 9 clients booked one per 25-minute slot	2 phlebotomists + 4 therapists, with on-costs, 22 weekdays + 4.33 Saturdays	+ A$42,255.18
3. Total costs at that roster	A$36,738.11 + A$42,255.18	**A$78,993.29**
4. Less non-AM revenue	PM services held at full steady state	- A$24,585.37
5. Costs AM GTT must cover	A$78,993.29 - A$24,585.37	**A$54,407.92**
6. Revenue per daily AM client per month	A$250 x 26.33 trading days	**A$6,582.50**
7. Break-even	A$54,407.92 ÷ A$6,582.50	**8.266 AM clients per day**

8.266 is 45.9% of the 18-client capacity, a margin of safety of 9.734 clients per day (54.1%). This is the break-even on the 25-minute cadence. The roster behind it (2 phlebotomists and 4 therapists) is what the cadence needs when bookings fall one per slot: at most two first services overlap at once, so 4 therapists cover up to 9 clients.

The break-even depends on how bookings land in the 25-minute slots

Booking pattern	Roster at the break-even	Break-even AM clients per day	GST-stress break-even
Bookings spread across the slots (one client per slot, spaced)	2 phlebotomists + 4 therapists	**8.266**	9.255
Planning case: bookings fill from 07:00, one client per slot first	2 phlebotomists + 4 therapists	**8.266**	14.083
Bookings stack in pairs from 07:00 (model solver as published)	2 phlebotomists + 8 therapists	12.655	14.083
Planning case if one phlebotomist is allowed on mornings of 9 or fewer (Anthony to decide, see Notes 1)	1 phlebotomist + 4 therapists	7.250	8.138

The headline is the planning case, **8.266**. The GST-stress break-even is 9.255 if the tenth booking lands in a slot not adjacent to another second-chair booking, and 14.083 if it does not (the roster then steps up to 6 or 8 therapists).

Comparison: fixed staffing (full 2 + 8 roster every morning)

Step	Working	Result
Steady-state total costs	Full roster every morning	A$107,883.97
Less non-AM revenue		- A$24,585.37
Costs AM GTT must cover		A$83,298.60
Break-even	A$83,298.60 ÷ A$6,582.50	**12.655 AM clients per day**

Rostering to bookings lowers break-even by about 4.4 clients per day. It does not change steady-state profit, because at 18 clients every role is needed.

4. Notes

1. **Cadence and rostering.** The 25-minute pair cadence is the only cadence: first booking 07:00, pairs at 07:00, 07:25, 07:50 and so on, last first draw 10:20, 9 pairs, 18 clients a morning at most. Staff are called in to match the confirmed slots each morning, AM and PM; idle staff are never rostered. Booking is 2 to 4 weeks ahead. **Phlebotomist minimum, flagged for**

Anthony: the model keeps 2 phlebotomists on every morning with a GTT booking, because the clinical protocol uses a second on-site phlebotomist for a difficult blood draw and the 2026-10-11 decision recorded 2 phlebotomists on every GTT morning as GTT's clinical standard. The model contains no regulation requiring it. Mornings of 9 or fewer need only one chair, so running 1 phlebotomist would save A$234.51 a weekday morning (A$6,682.23 a month) and lower break-even to 7.250. This is Anthony's decision.

2. **No ramp-up and fill rate.** Fill of rostered slots is assumed to be 100% from Month 1. At 85% fill, steady-state net is about +A$17.4k per month (A$17,413.65 before GST timing). At 70% fill the business makes a small loss (-A$359.10 a month). With no ramp-up to cushion it, fill is the central risk (financial model).
3. **GST.** GST treatment is general information only and must be confirmed with the accountant. The P&L is GST-inclusive with no line for GST paid; the GST-stress column shows the downside. Each percentage point of the AM package that is GST-free is worth A$107.71 a month at 18 clients a morning (financial model).
4. **Lab fee.** The model assumes A$0 to GTT. Each A$10 per client would cost about A$4,739 per month at capacity (financial model). Tender fees are to be confirmed.
5. **Rent.** A$8,000 is the headline per Anthony's instruction. The real search budget is A$9,500 to A$10,500 per month (financial model).
6. **Award rates.** Wage rates are the award casual rates (1 July 2026). Verify with Fair Work before acting.
7. **Not in the model:** income tax, depreciation, interest, rent during fit-out, early-release staffing upside.

Arithmetic check: every row and column above was re-summed by script and agrees to the cent with model v0.5 §3, §3a, §3d, §6a and §9. The steady-state month reproduces the model's own A$107,883.97 total cost and A$35,186.40 net exactly.
