Cashflow Forecast and Startup Capital

Business	GTT Center Perth
Document	Startup capital and 12-month cashflow forecast
Prepared by	Theodore (CFO) for Anthony Zed. Updated 2026-10-17 (Grace, to Anthony's instructions of 2026-10-16 and 2026-10-17)
Date	2026-10-17
Status	DRAFT for review
Legal entity	to be confirmed
Currency	Australian dollars (A$)
Basis	3-Way Financial Model v0.6 (2026-10-17), 25-minute cadence, adaptive rostering of phlebotomists and therapists (unchanged at 18 a morning), full capacity from Month 1 (no ramp-up), headline rent A$8,000 per month

All figures are planning estimates. The venue is not yet open and no trading data exists.

1. Startup capital

1a. By group (Low / Base / High)

The base is the founder-approved "Revised Recommended Opening Strategy" (2026-08-10).

Group	Low		High
Equipment, non-clinical	A$12,950	**A$12,950**	A$34,980
Clinical / blood collection equipment	A$6,330	**A$6,330**	A$10,240
Furniture, fixtures, fittings, signage	A$14,160	**A$14,160**	A$51,800
Fit-out / construction	A$138,328	**A$139,678**	A$306,029
IT / booking setup	A$820	**A$820**	A$7,550
Compliance, legal, design, approvals	A$7,639	**A$7,639**	A$28,239
Bond and lease	A$16,000	**A$16,000**	A$41,500
Pre-opening staff, launch marketing, opening stock	A$21,552	**A$26,707**	A$57,022
Contingency	A$26,133	**A$26,914**	A$107,472
Pre-opening capital (to open)	**A$243,912**	**A$251,198**	**A$644,832**
Working capital reserve	A$85,000	**A$85,000**	A$110,000
Total startup capital	**A$328,912**	**A$336,198**	**A$754,832**

Source: financial model. Low is the "Minimum Viable Opening"; High is the "Full Build" with 20% contingency.

Base = A$251,198 to open + A$85,000 working capital reserve = A$336,198.

Base detail (financial model): fit-out includes acoustic curtain fabric (+A$1,350); pre-opening staff A$22,872; launch marketing A$1,250; opening stock A$2,585. Line-by-line items are itemised in the model only for the full-scope scenarios (financial model).

1b. Range across model scenarios

Scenario	Total startup capital	Source
Low (Minimum Viable Opening)	A$328,912	Financial model
Base, A$8,000 rent (headline)	**A$336,198**	Financial model
Base, rent A$9,500	A$339,198	Financial model
Base, rent A$10,500 or A$10,500 gross ceiling	A$341,198	Financial model
High (Full Build)	A$754,832	Financial model

The rent cases change only the lease bond and one month's advance rent.

1c. Spend deferred to after opening (not in base)

Item	Amount	Month paid
Nail stations 3 and 4	A$3,000	Month 4
Hair chairs 3 and 4	A$2,600	Month 4
Acoustic treatment for curtain bays	A$4,874	Month 6
Full website build	A$1,200	Month 6
Professional photography	A$1,000	Month 6
3rd iPad + colour printer	A$700	Month 6
Total deferred	**A$13,374**	M4 A$5,600; M6 A$7,774

Source: financial model

2. Month 0 to 12 cash forecast

Figures in A$. Negative = cash out. There is no ramp-up: every month is a full-capacity month (18 clients a morning), so receipts and operating payments are the same in every month.

A$	Opening cash	Funding in	Receipts	Operating payments	Pre-opening capex	Deferred capex	GST paid (BAS)	Net cash flow		Cumulative (after GST)	Cumulative (before GST timing)
M0	0.00	336,198.00	0.00	0.00	-251,198.00	0.00	0.00	85,000.00	**85,000.00** ◄ LOW	-251,198.00 ◄ PEAK FUNDING	-251,198.00

M1 to M12 total		**0.00**	**1,716,844.44**	**-1,294,607.64**	**0.00**	**-13,374.00**	**-129,182.02**	**279,680.78**			

How to read the table - Opening cash, funding, pre-opening capex, deferred capex, GST paid and closing cash follow the 3-Way Financial Model v0.6 §4 (every cash figure is unchanged at 18 a morning: both chairs run). The model's own rules are unchanged: all funding in before opening, no debt, clients prepay at booking (no debtor or creditor timing), GST paid monthly in the month after. - Receipts are financial model's operating cash in every month. - **Cumulative (after GST)** = closing cash less A$336,198 capital in. **Cumulative (before GST timing)** excludes GST paid.

2a. Key cash measures

Measure	Figure	Source
Peak funding requirement (with GST timing)	**A$251,198.00**	Financial model-opening capital, because with no ramp-up there is no operating loss to fund
Lowest cash point	A$85,000.00, **at opening (Month 0)**	Financial model$85,000 working-capital reserve is never drawn
How it is reached	A$251,198 pre-opening capital; Month 1 makes a profit	Financial model
Payback, before GST timing	**Month 8** (cumulative +A$16,919.20)	Financial model
Payback, after GST	**Month 11** (cumulative +A$5,040.20)	Financial model

The earlier ramped forecast showed peak funding of A$267,771.03 (the Month 1 loss on top of the pre-opening capital) and payback in Month 11 (before GST timing) and Month 15 (after GST). Removing the ramp-up removes the Month 1 to 4 losses, so peak funding falls to the pre-opening capital and payback comes about 3 to 4 months sooner. Both rest on the waitlist

delivering a full morning from the first day.

3. Working capital buffer

Measure	Figure	Source
Working capital reserve at opening	A$85,000.00	Financial model
Deepest drop after opening	A$0.00 (cash rises from Month 1)	Financial model
Cash remaining above the low point (headroom)	**A$85,000.00**	Financial model
Runway if fill falls to 70% (12.6 clients a morning) from Month 1	9 full months (net after GST -A$8,871.51 a month; cash goes negative in Month 10)	Financial model

What the buffer is for (financial model): - The uncosted fit-out for the larger 257 to 290 sqm floor area, indicatively up to A$63,750. - Cafe equipment (A$5,000 to A$12,650), not in the base. - Rent during the fit-out period, not in the base. - Unspent contingency (up to A$26,914) and GST credits on fit-out would add headroom. Not counted.

At the A$10,500 gross ceiling peak funding is A$256,198.00 and the lowest cash point is A$85,000.00 (opening); the reserve is still not drawn (financial model).

4. Funding

Funding source per the model: **self-funded from founder savings, about A$200,000 (funding and ownership structure to be confirmed). No external investor sought to date** (figure to be confirmed).

Measure	Requirement	Less savings (about)	
Pre-opening capital only	A$251,198	A$200,000	**A$51,198**
Peak funding requirement	**A$251,198**	A$200,000	**A$51,198**
Total startup capital incl. A$85,000 reserve	A$336,198	A$200,000	**A$136,198**

The gaps are simple subtractions of the two sourced figures. How the gap is to be funded (loan, lease finance, investor) is **not in the model**: the model assumes all capital is put in before opening with no debt (financial model). Interest and repayments are therefore not in the model.

5. Notes

1. **No debt assumed.** All A$336,198 is received before opening. No loan drawdowns, interest or repayments are modelled.
2. **Pre-opening capital** (A$251,198, including the full contingency) is spent in Month 0. This is conservative.
3. **GST.** Monthly BAS, paid the month after (financial model). All sales are treated as taxable. GST treatment is general information only and must be confirmed with the accountant. The model's own P&L carries no GST line, so the model-basis payback is Month 8 and the after-GST payback is Month 11.
4. **Receipts timing.** Clients prepay at booking. No debtor or creditor timing is modelled.

5. **No ramp-up, fill rate is the central risk.** Fill is assumed 100% from Month 1. At 85% fill, peak funding stays A$251,198 but payback is Month 16 (before GST timing) and Month 35 (after GST). At 70% fill the business does not pay back and the A$85,000 reserve is used up in about 9 months (financial model).
6. **Lab fee** is assumed A$0 to GTT (model assumption). Tender fees are to be confirmed.
7. **Rent** is the A$8,000 headline per Anthony's instruction. Rent during fit-out is not in the base.
8. **Not in the model:** income tax, depreciation, interest, loan funding, cafe equipment, fit-out for the larger floor area.

Arithmetic check: every cash row was rolled forward by script from opening cash. The same roll-forward rules reproduced the earlier ramped forecast exactly (peak funding A$267,771.03, paybacks Month 11 and Month 15) before the ramp was removed.
