

GTT Center Perth

Financial Model & Report

Two-scenario canonical financial model (Table 1: 18 clients/day, Table 2: 12 clients/day)

IMPORTANT -- READ FIRST

This report presents CANONICAL (validated), MODELLED (calculated from canonical inputs), HISTORICAL-SUPERSEDED (preserved for traceability, no longer live), and BOUNDED (range, not exact) figures, each explicitly labelled. Neither Table 1 nor Table 2 is presented as the venture's primary scenario -- see VERIFICATION-TRACKER.md item 1m, still open. The funding requirement is a bounded range, not a single point estimate. No opening cash balance or financing structure is assumed anywhere in this report.

1. Executive Summary

GTT Center Perth's canonical financial model supports two committed scenarios, presented side by side throughout this report. Neither is designated the venture's primary basis -- Table 1 (18 clients/day) generates materially higher revenue and net operating result at identical headcount, but the founder decision to formally adopt it over Table 2 (12 clients/day) has not been made.

Metric	Table 1 (18/day)	Table 2 (12/day)
Client volume/day	18	12
Monthly revenue (steady state)	A\$155,215.80	A\$115,720.80
Total operating costs (steady state)	A\$98,634.10	A\$94,664.16
Net operating result (steady state, post-super)	A\$56,581.70	A\$21,056.64
24-month net operating result	A\$1,172,971.91	A\$368,159.42
Break-even AM client volume/day	9.404	8.801
Operating cash trough	-A\$30,885.75	-A\$66,335.12

Bounded funding requirement (universal, both scenarios): A\$357,390.00 - A\$577,180.00 -- a RANGE, not an exact figure. See Section 9.

2. Scenario Comparison

Figure 1: Month 5+ steady-state Revenue, Total Operating Costs, and Net Operating Result, both scenarios. Source: [tools/master_financial_model.py#compute_month_pnl](#).

Metric	Table 1 (18/day)	Table 2 (12/day)
Steady-state payroll	A\$84,654.10	A\$80,684.16
Steady-state opex	A\$13,980.00	A\$13,980.00
Annualised revenue	A\$1,862,589.60	A\$1,388,649.60
Annualised net operating result	A\$678,980.40	A\$252,679.68

3. Revenue Ramp

Months 6-24 are held flat at Month 5+ (steady state) -- no post-Month-5 growth curve exists in this repository's canonical data, so none is invented.

Figure 2: Revenue ramp, Month 1 to Month 5+, both scenarios. Source: data/canonical/revenue_ramp.yml.

4. 24-Month Financial Outlook

Figure 3: 24-month cumulative Net Operating Result, both scenarios. Source: [tools/master_financial_model.py#compute_24_month_pnl](#).

Month	Table 1 Net Result	Table 2 Net Result
Month 1	-A\$30,885.75	-A\$43,898.66
Month 3	A\$24,591.94	-A\$2,639.17
Month 5	A\$56,581.70	A\$21,056.64
Month 12	A\$56,581.70	A\$21,056.64
Month 24	A\$56,581.70	A\$21,056.64

5. Break-Even Analysis

A traditional contribution-margin break-even is NOT computed -- nearly every cost in this model is classified FIXED, and the GTT-supplies/consumables/laundry classification remains unresolved. What is computed is an AM client-volume break-even, holding Month 5+ PM revenue/payroll/opex fixed.

Figure 4: Break-even vs. committed AM client volume, both scenarios. Source: `tools/master_financial_model.py#compute_breakeven`.

Scenario	Break-Even Vol./Day	Margin of Safety
Table 1 (18 clients/day)	9.404	8.596
Table 2 (12 clients/day)	8.801	3.199

6. Operating Cash Position

OPERATING-CASH-basis view only (accrual-basis proxy, NOT a true cash-basis forecast). NOT a complete funding schedule -- excludes startup capital, capex, and any opening cash balance (none assumed).

Figure 5: Cumulative operating cash position, both scenarios, trough marked. Source: [tools/master_financial_model.py#compute_cash_flow](#).

7. Funding Requirement

BOUNDED (OUTCOME 2), NOT an exact figure. The underlying 6-9-range historical startup-cost reconciliation remains genuinely unresolved.

Component	Range (AUD)
(A) Pre-Opening Capital	A\$272,390.00 - A\$467,180.00
(B) Working Capital Reserve (historical basis)	A\$85,000.00 - A\$110,000.00
(A) + (B) Combined -- PRIMARY METHOD	A\$357,390.00 - A\$577,180.00

Bounded Funding Requirement: A357,390.00 – A577,180.00 (RANGE, NOT E)

Figure 6: Bounded funding requirement range. Source: data/models/master_financial_model.yml#funding_requirement_investigation.

Not included anywhere in this section: an opening cash balance (none exists in this repository), a financing/debt/equity structure (none assumed), or the operating cash trough summed on top of the working capital reserve (would double-count the same 'survive the ramp' concept).

8. Key Risks and Unresolved Assumptions

Item	Description	Status
30	Working capital reserve basis is a pre-rebase Month 1-3 loss estimate	UNRESOLVED
36	Historical vs. canonical revenue gap (A\$2,576.36/month)	RESOLVED (nuanced)
39	PM pre-booking discount not applied	UNRESOLVED
43	AM labour ramp not modelled (fixed from Month 1)	UNRESOLVED (disclosed)
45	GTT supplies/consumables/laundry classification	UNRESOLVED
46	Superannuation partial coverage (2 of 8 payroll components)	PARTIALLY RESOLVED
47	Funding requirement bounded, not exact	PARTIALLY RESOLVED

9. Methodology Notes

This report is generated entirely from data/canonical/*.yaml and data/models/master_financial_model.yaml. Every figure carries a governance status: CANONICAL (validated source data), MODELLED (computed from canonical inputs), HISTORICAL-SUPERSEDED (preserved for traceability only), BOUNDED (a range, not a point estimate), or UNRESOLVED (no defensible figure exists yet).

The historical A\$63,028.75 figure (Table 1, pre-2026-08-09-superannuation-fix) is a Monthly Net P&L; figure -- NOT revenue. It must never be relabelled as revenue in any deliverable.
